TITLE : FILTRATION EQUIPMENT

ABSTRACT : PROBLEM TO BE SOLVED: To provide a filtration equipment which hardly degrades a filtration function even when the differential pressure between the upstream side and downstream side of the filtration equipment increases.

SOLUTION: Filter media 14 which are formed with plural folding peaks 14a to a pleat form are held at a filter medium holder 16. Crests 14c existing on the upstream side of the folding peaks of the filter media 14 are provided with reinforcing members 18 integrated with the filter medium holder 16. The reinforcing members 18 maintain the spacings of the two filter surfaces 14b extending from the crests 14c.
